

Energy Efficiency Legislation Update

To promote greater lighting efficiency and smarter energy use, the U.S. Congress has passed energy efficiency legislation with numerous benefits for the economy and the public.

2005 Energy Policy Act

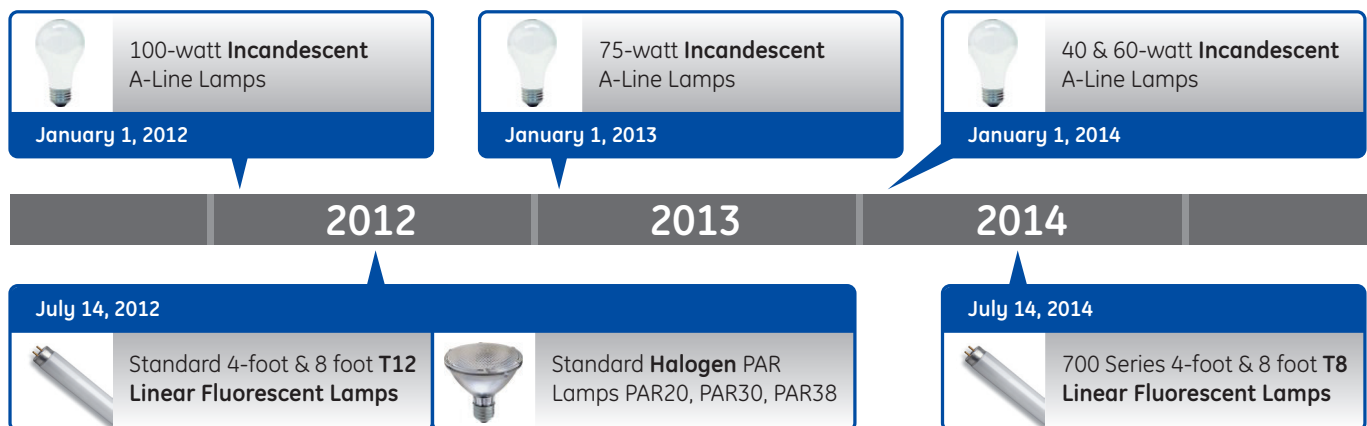

Established minimum efficiency requirements, incentives and research dollars for lamps, ballasts, fixtures and LEDs.

2007 Energy Independence & Security Act

Established minimum efficiency requirements for halogen and incandescent lamps beginning January 1, 2012.

2009 Department of Energy Regulations

In July of 2012, lumens per watt (LPW) requirements were placed on standard 4 ft, 8 ft linear & U shaped T12 lamps and Halogen PAR lamps. The 700 series T8 General Service Fluorescent Lamps (GSFLs) received a 2 year extension with a new effective date of July 14, 2014. After this date, these lamps can no longer be manufactured, or imported.

* There are exclusions to each of these regulations. For more specific details, visit www.gelighting.com/legislation. Regulation dates noted above determine when eliminated products may no longer be manufactured; existing inventory built prior to the effective date may be sold until exhausted.
